

## Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Southwest Florida Monday, 24 July 2017 NOAA National Ocean Service NOAA Satellite and Information Service NOAA National Weather Service

NOAA National Weather Service
Last bulletin: Monday, July 17, 2017

Satellite chlorophyll image with possible *K. brevis* HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from July 14 to 21: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Florida Fish and Wildlife Conservation Commission (FWC) Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

https://tidesandcurrents.noaa.gov/hab/hab\_publication/GOMX\_HAB\_Bulletin\_Guide.pdf

Detailed sample information can be obtained through FWC Fish and Wildlife Research Institute at: http://myfwc.com/redtidestatus

# **Conditions Report**

*Karenia brevis* (commonly known as Florida red tide) ranges from not present to background concentrations along the coast of southwest Florida, including the Florida Keys. No respiratory irritation is expected Monday, July 24 through Monday, July 31. For recent local observations and data, check Mote Marine Laboratory Daily Beach Conditions (http://visitbeaches.org/) and the Florida Fish and Wildlife Conservation Commission Red Tide Status (http://myfwc.com/redtidestatus).

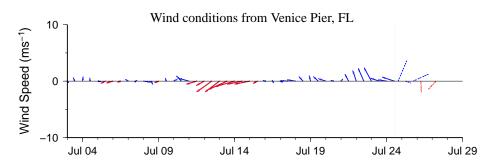

### **Analysis**

Recent samples received from alongshore southwest Florida, from Pinellas to Collier counties, all indicate that *Karenia brevis* is not present, with the exception of background concentrations collected from Pinellas County (FWRI, SCHD; 7/14-21). Detailed sample information and a summary of impacts can be obtained through FWC Fish and Wildlife Research Institute at: <a href="http://myfwc.com/redtidestatus">http://myfwc.com/redtidestatus</a>.

Recent ensemble imagery (MODIS Aqua, 7/23; shown left) has been obscured by clouds along- and offshore southwest Florida, preventing analysis.

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, July 31.

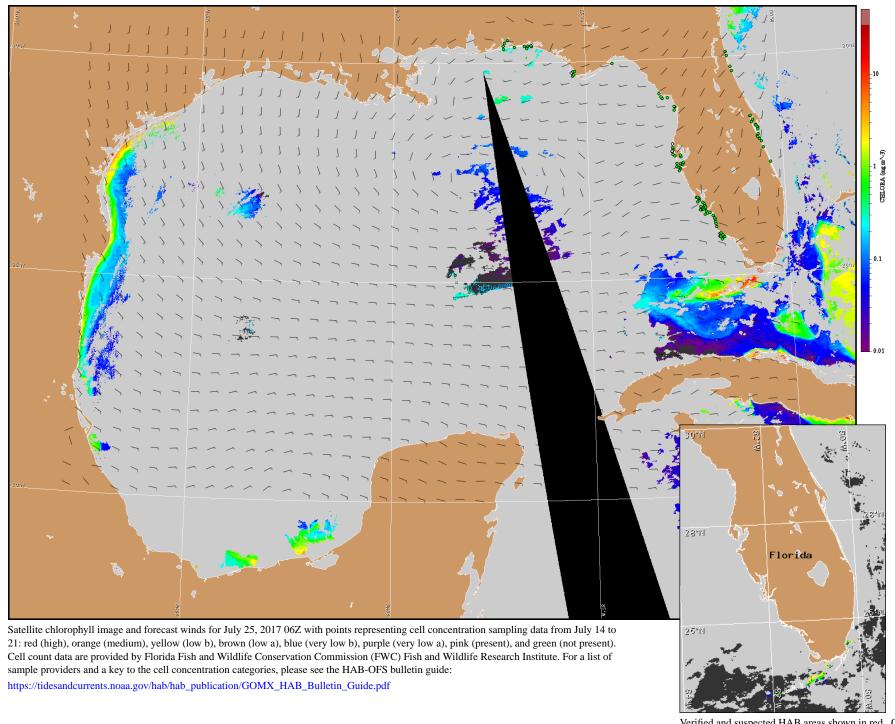

#### Kavanaugh, Keeney

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

## Wind Analysis

**Englewood to Tarpon Springs (Venice**): Variable winds (5-10kn, 3-5m/s) today through Friday.

Verified and suspected HAB areas shown in red. Other areas with *K. brevis* optical characteristics shown in yellow (see p. 1 analysis for interpretation).
